Designed for maximum simplicity, it also covers sophisticated topics typically discussed in advanced surveying courses. This edition has been reorganized and streamlined to align tightly with current surveying practice, and to teach more rapidly and efficiently. It adds broader and more valuable coverage of aerial, space and ground imaging, GIS, land surveying, and other key topics. An extensive set of appendices makes it a useful reference for students entering the workplace. Since the first edition was published in 1983, Building Surveys has been the core text in its field for

students and professionals alike. Covering everything needed for initial inspections such as equipment, know-how and procedures to writing an accurate report, this book is a proven indispensable guide. It considers all the structural elements required when surveying a property for example, foundations, walls and roofs as well as what to look out for and how to deal with it. Legal considerations and recent cases are used to illustrate good working practice making this a comprehensive text to this important subject. \* Based on real-life experience

of professional surveyors \* Covers knowledge, techniques and equipment needed to inspect and report on a range of properties \* Legal and regulatory requirements fully updated and explained including the changed circumstances in relation to the governments Home Information Packs and in particular the relegation of the Home Condition Report to the status of optional, rather than obligatory, part of the pack. \* Claims against surveyors has resulted in the much greater use of action paragraphs in surveyors reports and new to this edition the specimen report in the book has been

re-written to reflect this \* Additional colour photographs have been added which improve the readability and look of the book and enhance the text. Comprehensive, yet written in readily-accessible language, this overview of surveying is intended for those with no previous exposure to the subject. New features to this edition include the introduction of the Global Positioning System (GPS) and Geographic Information Systems, an introduction to the radiation method of surveying tracts of land, and finally, new and revised problems throughout. Problems and
