Fundamentals of Turbomachinery Mar 29 2021 A comprehensive introduction to turbomachines and their applications With up-to-date coverage of all types of turbomachinery for students and practitioners, *Fundamentals of Turbomachinery* covers machines from gas, steam, wind, and hydraulic turbines to simple pumps, fans, blowers, and compressors used throughout industry. After reviewing the history of turbomachinery and the fluid mechanical principles involved in their design and operation, the book focuses on the application and selection of machines for various uses, teaching basic theory as well as how to select the right machine for a specific use. With a practical emphasis on engineering applications of turbomachines, this book discusses the full range of both turbines and pumping devices. For each type, the author explains: * Basic principles * Preliminary design procedure * Ideal performance characteristics * Actual performance curves published by the manufacturers *

Application and appropriate selection of the machine Throughout, worked sample problems illustrate the principles discussed and end-of-chapter problems, employing both SI and the English system of units, provide practice to help solidify the reader's grasp of the material.

The Lost Art of Steam Heating Aug 02 2021 This was my first book and a true labor of love. I spent decades studying steam and the work of Dead Men, in both old buildings and on library shelves. I traveled the country, haunting used-book stores, looking for engineering books that held the answers to questions that nagged at me. I was obsessed with this topic, and when I finally sat to write, I poured all that I had learned into this book, and as I wrote, I tried my best to make the words sound good to you - like we were together and having a conversation. I wanted you to know what I know and I wanted you to be able to do what I can do when it comes to old steam systems. This book arrived in 1992 and has since gone through dozens of printings. We've sold it in every state as well as in foreign countries. Steam heat is everywhere there are old buildings, so why shouldn't you be the one with the answers? Dan Holohan

Residential Duct Systems - Manual D Feb 20 2023 The Third Edition of ANSI/ACCA Manual D is the Air Conditioning Contractors of America procedure for sizing residential duct systems. This procedure uses Manual J (ANSI/ACCA, Eighth Edition) heating and cooling loads to determine space air delivery requirements. This procedure matches duct system resistance (pressure drop) to blower performance (as defined by manufacturer's blower performance tables). This assures that appropriate airflow is delivered to all rooms and spaces; and that system airflow is compatible with the operating range of primary equipment. The capabilities and sensitivities of this procedure are compatible with single-zone systems, and multi-zone (air zoned) systems. The primary equipment can have a multi-speed blower (PSC motor), or a variable-speed blower (ECM or constant torque motor, or a true variable speed motor). Edition Three, Version 2.50 of Manual D (D3) specifically identifies normative requirements, and specifically identifies related informative material.

Which Path Toward Eternity? May 19 2020 Will you be filled with hope and love when you die? You do have a choice. You can take death as it comes. You can grit your teeth and go down like a fighter. Or maybe you can get as much perspective and information as is available and make a sincere and deliberate attempt to prepare the best way you can. This book can help. Death can come like a thief in the night. It can come much earlier than expected. It can come very late, after we have given up hope and have become unable to fully prepare. But it will come. What a gift to have had the opportunity to live. Many have been denied this. What a gift to have had the opportunity to grow in love. Many have rejected this. Why? We have been given intelligence and free will. We can use these gifts to grow in understanding and love, or we can use them to further our

own selfish desires. It is our choice. We can see only human weakness and curse the darkness. We can see light and goodness and seek only to increase them. It is our choice. Issues. Issues needed to be addressed-requiring knowledge, and ultimately wisdom, to engage them. This book tries to provide insight into these and similar observations. Whether it can be useful will depend greatly on the sincerity and commitment of the reader to read, to contemplate-devoid of preconceived biases-searching only for the Truth. The source of all goodness, all truth, is God. Without God there are only the shifting sands of human weakness and selfishness. This issue we must address before all others. From there we can proceed with confidence toward the Light.

Musings of an Energy Nerd Jun 19 2020 In this fascinating collection of postings from his popular “Musings of an Energy Nerd” blog, Green Building Advisor's Martin Holladay cuts through the hype and myths about energy efficiency, sustainability, and green building to present the very best ways to make your home more energy efficient. Martin Holladay has been making weekly postings to his “Musings of an Energy Nerd” blog on Green Building Advisor since January 2009. Along the way, he has gathered a devoted following of “energy nerds” who await his weekly musings with rapt anticipation. For the first time, the 50 most popular postings have been assembled in book form to give homeowners a great opportunity to live a more energy-efficient life in their homes. The book begins with an overview of energy priorities, and a discussion of what we mean by terms like green and sustainable. Martin presents several options for energy upgrades for an existing house (from replacing windows to adding superinsulation) before looking at ways to improve the energy efficiency of a new house. Separate chapters follow on HVAC, domestic hot water, appliances, and renewable energy, before the book wraps up with an eye-opening chapter on useless products, scams, and myths (including Martin's list of “Stupid Energy-Saving Tips”).
