Canon Speedlites and Nikon Speedlights are small, off-camera flashguns that can provide big results - if you know how to use them properly. Acclaimed Boston photographers Lou Jones, Bob Keenan and Steve Ostrowski guide you through the technical and creative aspects of how to get the most out of these powerful tools in this indispensable guide, packed full of inspirational images and comprehensive diagrams of the lighting set ups used to capture them. They are significantly more advanced, lighter and considerably cheaper than a standard flashgun, and have many advantages. They are small (and cheap) enough that a number can be carried in your kit, and they can be used in combination, triggered wirelessly. They use through-the-lens (TTL) metering, which allows you to use the in-camera LCD and histograms to calculate the required power/direction, rather than havng to use a light meter or trial and error. They use proprietary, dedicated technology (from Canon and Nikon) that means there are no compatability issues. Getting the most out of them, however, remains a mystery - most photographers still just use their speedlights in the same way as a standard flash gun. This is where this book comes in. En instruktionsbog (Flight Manual) for B-36 Peacemaker. Special edition of the Federal Register, containing a codification of documents of general applicability and future effect ... with ancillaries. This new hardcover edition, at 304 pages, is more than double the size of the original manual. The number of lock projects has increased from five to fourteen. And the first section on blacksmith lockmaking tools and techniques can now be considered a complete manual in its own right. The authors have maintained their original trademark style that relies on well-illustrated step-by-step instructions that guide you through the whole lock-making process. They have also kept their low-tech approach that demonstrates how to go about creating good work using only a handful of simple tools. For *The New Spruce Forge Manual of Locksmithing*, Bill Morrison and Denis Frechette divided the book into two distinct sections: *Technical Information*: This section is a complete reference manual that covers the specific techniques needed to build all the parts for each lock, as well as providing all the information needed to understand the assembly instructions outlined in the second section. *The Locks: Patterns and Instructions*: This section provides all the plans and detailed step-by-step instructions for each of the 14 lock projects in this new edition. The detailed and clear assembly instructions describe when and how to use the technical information provided in section one. This is the most complete book available on how to use simple technology to solve complex metalworking problems. What you learn in this book will provide you with the skills needed to replace a broken "blacksmith-lock" with a similar one of your own making for an old gate, door, cabinet, chest, etc. After having worked through the projects you will have gained the skills and confidence to fashion replacement parts for old "blacksmith locks" needing repair.
