The documents here published are all instructions of an official or semi-official nature issued by the Persian satrap of Egypt or other high-ranking Persian officers to subordinate Persian administrative officers in Egypt; only one contains instructions from the satrap to Persian and Babylonian officers commanding districts on the way from Babylonia to Syria. All are drafted in the form of private letters, but, thanks to the high position of the senders, several of them refer to or are concerned with affairs of considerable public importance. The letters deal for the most part with a single subject, the administration of the domain-lands in Egypt held by highly placed Persian officers and the difficulties arising out of the mutual relations of the local officers of the administration to one another and to the subject population. The problems raised in them are the collection and transport of the revenues of these domains, the assignment of a father's revenues to a son who has succeeded to his office, the transfer of a domain to a deceased tenant's son, a summons to appear before the satrap, measures to be taken for the protection of the satrap's property and for recruiting additional staff for employment on his estate, the release of soldiers wrongfully seized and detained, an order to a negligent officer to carry out his instructions, the reprimand of an officer who has disobeyed an order to assign or transfer some men to another officer and has, moreover, been guilty of robbery, assault and battery, and the punishment of servants or slaves who have robbed the officer in charge of them and run away. --from the Introduction This book defines the current state-of-the-art for predicting the lifetime of plastics exposed to weather and outlines the future research needed to advance this important field of study. Coverage includes progress in developing new science and test methods to determine how materials respond to weather exposure. This book is ideal for researchers and professionals working in the field of service life prediction. This book also: Examines numerous consensus standards that affect commercial products allowing readers to see the future of standards related to service life prediction Provides scientific foundation for latest commercially viable instruments Presents groundbreaking research including the blueprint of a new test method that will significantly shorten the service life prediction process time Covers two of the latest verified predictive models, which demonstrate realized-potential to transform the field OGT Exit Level Reading Workbook prepares students for the reading portion of the Ohio Graduation Test. Samples from similar tests provide plenty of practice and students learn to take multiple choice tests on their comprehension of what they read. Students learn to evaluate their own short answers to targeted questions, and learn from other students' responses to similar questions. This book is suitable for students in all states who need to take a reading exam for graduation or course completion. PIANO & I GIRLFRIEND FALLIN' TROUBLES ROCK WITH U A WOMAN'S WORTH JANE DOE GOODBYE THE LIFE MR MAN NEVER FELT THIS WAY BUTTERFLYZ WHY DO I FEEL SO SAD CAGED BIRD LOVING U A mesmerizing, mysterious glimpse into memories of growing up and experiencing change. This book helps you tap into a special kind of perception and awareness of soul. These carefully crafted words are as captivating for your eyes as they are for your mind and heart. Explore the ways in which we all connect with ourselves and each of our intertwined realities. A collection of journalistic interviews which span Jung's lifetime. This book captures his personality and spirit in more than 50 accounts of talks and meetings with him. They range from transcripts of interviews for radio, television, and film to memoirs written by notable personalities. Inspired by the much-loved classic Ballet Shoes by Noel Streatfeild, Into the Spotlight is a magical new story from bestselling author and acclaimed performer Carrie Hope Fletcher. Brilliant Aunt Maude visits seashores the world over and has become quite the pebble collector. Pebbles of all shapes, sizes and colours and even one that looked a bit like Elvis Presley if you squinted a bit. Her favourite pebbles, however, are Marigold, Mabel and Morris. One by one, and by strange and unusual ways, each child arrives at the stage door of Brilliant Aunt Maude's theatre in the heart of London, home to an extraordinary cast of performers. There's Dante the miraculous magician, Petunia the storyteller and seventy-year-old contortionists - the Fortune Sisters! But ticket sales are dwindling and the curtains might have to close - for the final time. Until one day, as the Pebbles are exploring the many nooks and crannies of the theatre, they stumble upon something they were never meant to find . . . something that just might save the theatre after all . . . The Accreditation Board for Engineering and Technology (ABET) introduced a criterion starting with their 1992-1993 site visits that "Students must demonstrate a knowledge of the application of statistics to engineering problems." Since most engineering curricula are filled with requirements in their own discipline, they generally do not have time for a traditional two semesters of probability and statistics. Attempts to condense that material into a

single semester often results in so much time being spent on probability that the statistics useful for designing and analyzing engineering/scientific experiments is never covered. In developing a one-semester course whose purpose was to introduce engineering/scientific students to the most useful statistical methods, this book was created to satisfy those needs. Provides the statistical design and analysis of engineering experiments & problems Presents a student-friendly approach through providing statistical models for advanced learning techniques Covers essential and useful statistical methods used by engineers and scientists Let one of the world's greatest swimming coaches teach you how to perfect your competitive strokes In "Swimming Fastest"--a revised and updated version of one of the best books ever written on competitive swimming--author Ernest Maglischo reveals the science behind the training principles that led his teams to 13 NCAA national championships at the Division II level and 19 conference championships. This book is the definitive reference on stroke technique and training methods for swimming. It shows you how to apply scientific information to the training process so that you can swim stronger and faster. "Swimming Fastest" addresses not only the how but also the why of training. It's the one source that you can turn to for reliable information about hydrodynamics and exercise physiology, giving you all the information you need to evaluate present and future concepts of training and stroke mechanics. "Swimming Fastest" covers every aspect of competitive swimming. The book is heavily illustrated, with more than 500 illustrations and photos featuring world-class swimmers. Sequences of photos taken from the front, side, and underneath views show you exactly how to perform competitive strokes, starts, and turns. This book is a source that coaches and athletes will pull down from their shelves again and again for reference. In part I Maglischo masterfully explains the mechanics of competitive swimming. He presents detailed technique analysis of the four primary strokes: freestyle, backstroke, breaststroke, and butterfly. He also explores the roles of stroke rate, stroke length, and drag reduction and reevaluates the role of lift forces and the Bernoulli principle in swimming propulsion. He explains the complex relationship between stroke length and stroke rate and swimming speed, and he reviews recent findings on the physical basis of swimming propulsion and the techniques that swimmers use to apply propulsive force. Part II explains the physiology behind the most effective training methods and provides detailed sample workouts and training programs for each event. Maglischo provides critical information to help you train more accurately and monitor your training more effectively. He evaluates current training theory, explaining why the anaerobic threshold theory of training needs revision and why muscle fiber types are important to swim training. Maglischo also presents important new studies that define the relationship between endurance and sprint training, and he suggests their implications for training. Part III addresses topics that pertain specifically to competition and racing. Maglischo shares his insights and recommendations for pre-race tapering, establishing race pace, racing strategies, and post-race routine. Every swimming coach and serious swimmer will benefit from this book. "Swimming Fastest" will be the first resource you turn to when you want to trim precious seconds off your best times.

"It's Just a Plant follows the journey of a young girl named Jackie, who becomes curious about cannabis after she discovers her parents smoking a joint in their bedroom. Jackie's education about marijuana includes visits to several members of her community, including a farmer who cultivates the plant and a doctor who advises that cannabis should only be used by adults...Cortés' book offers an opportunity for parents to discuss many aspects of the conversation around marijuana." --High Times "Part of a growing category of books that attempt to explain difficult and complex topics to children, simply. Whether you're looking at Death Is Stupid, by Anastasia Higginbotham, or A is for Activist, by Innosanto Nagara, children's fiction is much less likely to shy away from topics that were previously reserved for those considered to be 'adults,' or to cloud those topics in euphemisms." --Literary Hub, selected by Molly Odintz for LitHub Recommends "As controversial as the topic may seem for a kids' book, [Cortés is]...right. It's crucial for parents to be open and educate their kids about marijuana (and any other drugs, really) in a factual, non-judgmental way--especially if parents are using themselves. After all, keeping drugs' existence a mystery is only going to spark curious kids' interests further." --SheKnows "With more home schooling taking place due to COVID-19, Ricardo Cortés hopes It's Just a Plant can spark family-friendly cannabis education." --Mugglehead "We've all heard the sentiment that the more we keep our kids away from something and paint it as 'dangerous' or 'bad,' the more likely they are to be interested in whatever that is. The same can be said for conversations like his--if we avoid or brush off any questions relating to marijuana for our kids, they're going to get the information from somewhere and it just feels a whole lot safer knowing they're getting the right information from you--or a book like this." --Fatherly "Absolutely 'kid friendly' in tone, organization and presentation, It's Just a Plant: A Children's Story about Marijuana is especially recommended for family, preschool, elementary school, and community library...collections." --Midwest Book Review "The fact is, kids who have parents who talk to them openly and respectfully about tough subjects are better able to navigate the chaos of the teen and young adult years. And for that reason, I am so here for this book." --Momtastic It's Just a Plant is a children's book that follows the journey of a young girl as she learns about the marijuana plant from a cast of characters including her parents, a local farmer, a doctor, and a police officer. Marijuana can be hard to talk about. Many parents have tried it, millions use it, and most feel awkward about disclosing such histories (often ducking the question), for fear that telling kids the truth might encourage them to experiment too. Meanwhile, the "drug facts" children learn in school can be more frightening than educational, blaming pot for everything from teenage pregnancy to terrorism. A child's first awareness of drugs should come from a better source. It's Just a Plant is a story for parents who want to discuss the complexities of pot with their kids in a thoughtful, fact-oriented manner. The book also features an afterword by Marsha Rosenbaum, PhD, founder of the Safety First Project for drug education and director emerita of the San Francisco office of the Drug Policy Alliance, the nation's leading organization working to end the war on drugs.

This is a cookbook with step-by-step instructions and code examples required to learn WordPress plugin development easily. If you are a WordPress user, developer, or a site integrator with basic knowledge of PHP and an interest to create new plugins to address your personal needs, client needs, or share with the community, then this book is for you. The first official, illustrated, oral history of prog rock legends Jethro Tull. Illustrated throughout with previously unseen, personal and classic photographs and memorabilia, Jethro

Tull's story is told by Ian Anderson, band members past and present and the people who helped Tull become one of the most successful bands in rock history. The subject of Kleinian groups and hyperbolic 3-manifolds is currently undergoing explosively fast development, the last few years having seen the resolution of many longstanding conjectures. This volume contains important expositions and original work by some of the main contributors on topics such as topology and geometry of 3-manifolds, curve complexes, classical Ahlfors-Bers theory, computer explorations and projective structures. Researchers in these and related areas will find much of interest here. An extraordinary book important both for its clarification of the phenomenon of synchronicity and for its implications for the survival of Western civilization. The author, scientist and Jungian analyst, takes readers gently through a basic understanding of physics, from classical Newtonian to modern quantum, and weds that to C.G. Jung's long-standing inquiry into the enigmatic relationship between matter and spirit, selfhood and destiny. This newly translated volume of the Collected Works of Marie-Louise von Franz, one of the most renowned authorities on fairytales, presents a systematic and wide-ranging approach. Von Franz amplifies a variety of fairytale motifs to show that the magical realm is alien to the profane and mundane realm of ordinary daily life. She was one of Analytical Psychology's most original thinkers and here she presents a lucid, concise exploration of the archetypal symbols found in fairytales. The Collected Works of Marie-Louise von Franz is a 28 volume Magnum Opus of one of the leading minds in Jungian Psychology. The first volume, Archetypal Symbols in Fairytales: The Profane and Magical Worlds, releases on her 106th birthday, January 4th, 2021 and is to be followed by 27 more volumes over the next 10 years. Fairytales, like myths, provide a cultural and societal backdrop that helps the human imagination narrate the meaning of life's events. The remarkable similarities in fairytale motifs across different lands and cultures inspired many scholars to search for the original homeland of fairytales. While peregrinations of fairytale motifs occur, the common root of fairytales is more archetypal than geographic. A striking feature of fairytales is that a sense of space, time, and causality is absent. This situates them in a magical realm, a land of the soul, where the most interesting things happen in the center of places like Heaven, mountains, lakes, and wells. At the age of eighteen, Marie-Louise von Franz was invited to meet Carl Gustav Jung at Bolingen Tower. She immediately recognized that there exist two levels of reality, one outer and the other inner. Within months she had enrolled at the University of Zürich and began attending Jung's lectures at the E.T.H. (Eidgenössische Technische Hochschule or the Swiss Federal Institute of Technology). Less than a decade after meeting Jung, von Franz had completed her doctorate in classical philology and begun seeing her first analysands. She was a prolific writer, a dedicated teacher and lecturer, and was possessed of a "far-reaching and often non discriminating Eros that accepted everyone seeking help." (Alfred Ribi, MD in Fountain of the Love of Wisdom, Chiron, 2006)

Durability and Reliability of Polymers and Other Materials in Photovoltaic Modules describes the durability and reliability behavior of polymers used in Si-photovoltaic modules and systems, particularly in terms of physical aging and degradation process/mechanisms, characterization methods, accelerated exposure chamber and testing, module level testing, and service life prediction. The book compares polymeric materials to traditional materials used in solar applications, explaining the degradation pathways of the different elements of a photovoltaic module, including encapsulant, front sheet, back sheet, wires and connectors, adhesives, sealants, and more. In addition, users will find sections on the tests needed for the evaluation of polymer degradation and aging, as well as accelerated tests to aid in materials selection. As demand for photovoltaics continues to grow globally, with polymer photovoltaics offering significantly lower production costs compared to earlier approaches, this book will serve as a welcome resource on new avenues. Provides comprehensive coverage of photovoltaic polymers, from fundamental degradation mechanisms, to specific case studies of durability and materials failure Offers practical, actionable information in relation to service life prediction of photovoltaic modules and accelerated testing for materials selection Includes up-to-date information and interpretation of safety regulations and testing of photovoltaic modules and materials

That Devil Music: Best Rock Writing 2014 is an anthology of writing about rock 'n' roll and the good folks that make the music. For chess players whom are rated 1900 - 2200. Great book for kids and adults! As the first Chinese player to defeat a Western grandmaster, Liu Wenzhe is ideally equipped to chart the dramatic progress of Chinese players over the past 25 years. Here he reveals the unique approach, training methods and secrets of his Chinese School of Chess, based on "The Art of Thinking." Perfect for club and tournament players--and anyone interested in chess history and culture. Beginner "Rich detail and vivid anecdotes of adventure....A treasure trove of

exotic fact and hard thinking." —New York Times Book Review For millennia, lions, tigers, and their man-eating kin have kept our dark, scary forests dark and scary, and their predatory majesty has been the stuff of folklore. But by the year 2150 big predators may only exist on the other side of glass barriers and chain-link fences. Their gradual disappearance is changing the very nature of our existence. We no longer occupy an intermediate position on the food chain; instead we survey it invulnerably from above—so far above that we are in danger of forgetting that we even belong to an ecosystem. Casting his expert eye over the rapidly diminishing areas of wilderness where predators still reign, the award-winning author of *The Song of the Dodo* and *The Tangled Tree* examines the fate of lions in India's Gir forest, of saltwater crocodiles in northern Australia, of brown bears in the mountains of Romania, and of Siberian tigers in the Russian Far East. In the poignant and troublesome ferocity of these embattled creatures, we recognize something primeval deep within us, something in danger of vanishing forever. *Damn Son Where Did You Find This?* is the first book ever to focus on the cover art of the modern US hip-hop mixtape. A visual world that reached unseen levels at the turn of the millennium, uncensored, unregulated and extreme, it is the most anarchic of all genres of graphic design. Freed from major label guidelines, lawyer opinions and moral hindrances the designers featured in this seminal book are truly unique - something that is hard to come by in today's global world of intertwined visual tendencies. Along with 500 cover artworks from designers KidEight, Miami Kaos, Mike Rev, Tansta & Skrilla, including interviews with artists and DJs which tell the stories of how they slipped into the hip-hop mixtape industry. They take us through the creative process, how visual trends have come and gone, moral hazards and how designing mixtape covers changed the trajectories of their lives. This book is a document showing the work of five extraordinary Adobe Photoshop wizards who day after day, get up, draw up an epic scene centered around one or more rappers, and finish it off with blazing typography, all in the matter of a couple of hours and for as many hundred dollars. Created by graphic designer Michael Thorsby, and media producer Tobias Hansson

God's creation, we have found, has a better picture and better sound. And worlds of wonder all around! Thanks, Lord, for this world we've found! Mama Bear pulls the plug on TV and the Bear cubs are upset! What are they going to do now? All it takes is a peek outside for Brother and Sister to see that God has given them a beautiful world that is far more fun than the TV screen. Susie meets a talent agent who promises to make her a pop star. The author of "Tales of the Screaming and Mad" and "Jesus, Devil, Deed" offers another collection of short tales, this time peppered with dark poetry. In this journey into the dark and surreal, we will pose the following questions: What might an ages-old spirit do when it finds itself in need of a new kind of work? What is the fate of a suspected pedophile when justice is meted out by a most unusual duo? Who is the woman, frozen in time, who just might be humankind's ultimate savior? Who is tasked with burying the last man on Earth? From scary tales, to science fiction, to fantasy, Dee Calhoun delivers a bit of everything here. Danish artist Carina Daugaard Olsen provides the illustrations. "This document is the 4th of 12 Parts of the official triennial compilation and publication of the adoptions, amendments and repeal of administrative regulations to California Code of Regulations, Title 24, also referred to as the California Building Standards Code. Part 4 is known as the California Mechanical Code and incorporates, by adoption, the 2012 edition of the Uniform Mechanical Code of the International Association of Plumbing and Mechanical Officials with the California amendments"--Preface. Coaching foundation - Stroke technique - Coaching plans - Meets - Evaluation. "The authors of the bestselling Halsey's Typhoon do a fine job recounting one brutal, small-unit action during the Korean War's darkest moment." —Publishers Weekly November 1950, the Korean Peninsula. After General MacArthur ignores Mao's warnings and pushes his UN forces deeper into North Korea, his 10,000 First Division Marines find themselves surrounded and hopelessly outnumbered by 100,000 Chinese soldiers near the Chosin Reservoir. Their only chance for survival is to fight their way south through the Toktong Pass, a narrow gorge that will need to be held open at all costs. The mission is handed to Captain William Barber and the 234 Marines of Fox Company, a courageous but undermanned unit of the First Marines. Barber and his men climb seven miles of frozen terrain to a rocky promontory overlooking the pass, where they will endure four days and five nights of nearly continuous Chinese attempts to take Fox Hill. Amid the relentless violence, three-quarters of Fox's Marines are killed, wounded, or captured. Just when it looks like they will be overrun, Lt. Colonel Raymond Davis, a fearless Marine officer who is fighting south from Chosin, volunteers to lead a daring mission that will seek to cut a hole in the Chinese lines and relieve the men of Fox. This is a fast-paced and gripping account of heroism in the face of impossible odds. Don't know what to do with your life? Drawn to so many things that you can't choose just one? New York Times best-selling author Barbara Sher has the answer--do EVERYTHING! With her popular career counseling sessions, motivational speeches, workshops, and television specials, Barbara Sher has become famous for her extraordinary ability to help people define and achieve their goals. What Sher has discovered is that some individuals simply cannot, and should not, decide on a single path; they are genetically wired to pursue many areas. Sher calls them "Scanners"--people whose unique type of mind does not zero in on a single interest but rather scans the horizon, eager to explore everything they see. In this groundbreaking book, you will learn: What's behind your "hit and run" obsessions When (and how) to finish what you start How to do everything you love What type of Scanner you are (and which tools you need to do your very best work) Alan Lewis Silva is a California author and folk singer, independent publisher of over 400 songs in the vein of blues, fado, folk-rock, and jazz.
