From the outbreak of the Cold War to the rise of the United States as the last remaining superpower, the years following World War II were filled with momentous events and rapid change. Diplomatically, economically, politically, and culturally, the United States became a major influence around the globe. On the domestic front, this period witnessed some of the most turbulent and prosperous years in American history. "Postwar America: An Encyclopedia of Social, Political, Cultural, and Economic History" provides detailed coverage of all the remarkable developments within the United States during this period, as well as their dramatic impact on the rest of the world. A-Z entries address specific persons, groups, concepts, events, geographical locations, organizations, and cultural and technological phenomena. Sidebars highlight primary source materials, items of special interest, statistical data, and other information; and Cultural Landmark

entries chronologically detail the music, literature, arts, and cultural history of the era. Bibliographies covering literature from the postwar era and about the era are also included, as are illustrations and specialized indexes.

"[This book] celebrates aviation's most significant achievements through the stories behind twenty-nine legendary aircraft housed at the NASM."--Jacket. Let this guide show you why the Outer Banks is one of the most unique and interesting places in the U.S. to visit. The Outer Banks preserves history and traditions lost to more urban areas of the eastern U.S. Whether it's wild Banker ponies, historic Kitty Hawk, or hidden beaches that visitors would otherwise never find, author Renee Wright leads you to her Wright Choices." Explorer was the original American space program and Explorer 1 its first satellite, launched in 1958. Sixty years later, it is the longest continuously running space program in the world, demonstrating to the world how we can explore the cosmos with small spacecraft. Almost a hundred Explorers

have already been launched. Explorers have made some of the fundamental discoveries of the Space Age. Explorer 1 discovered Earth's radiation belts. Later Explorers surveyed the Sun, the X-ray and ultraviolet universes, black holes, magnetars and gamma ray bursts. An Explorer found the remnant of the Big Bang. One Explorer chased and was the first to intercept a comet. The program went through a period of few launches during the crisis of funding for space science in the 1980s. However, with the era of 'faster, cheaper, better,' the program was reinvented, and new exciting missions began to take shape, like Swift and the asteroid hunter WISE. Discovering the Cosmos with Small Spacecraft gives an account of each mission and its discoveries. It breaks down the program into its main periods of activity and examines the politics and debate on the role of small spacecraft in space science. It introduces the launchers (Juno, Thor, etc.), the launch centers, the ground centers and key personalities like James Van Allen who helped develop and run the

spacecraft's exciting programs. Readers discover the latest advantages that Microsoft PowerPoint has to offer with this new book in the next generation of the Shelly Cashman Series. Richly illustrated with Charles Heaphy's remarkable paintings and drawings as well as photographs and maps from the period, this engaging work

tells the story of Heaphy's life and his art. A draughtsman, explorer, surveyor, gold agent, geologist, soldier, war hero, politician, land commissioner, and judge—even by the versatile standards of Victorian pioneers, Charles Heaphy had an unusually varied career. His biography tells as much about his own life as it does of the settlement of New Zealand. From his earliest surviving watercolor of bird life in 1839 to his last-known sketch, drawn on the back of an envelope in 1879, Charles Heaphy's art represents a remarkable visual diary of life as a settler in New Zealand.
