Many aerodynamic configurations are too complex to be represented by a single computational mesh. A multiple-mesh domain decomposition method called chimera has been developed to allow complex aerodynamic configurations to be modeled by a system of individually generated meshes, each representing a component of the overall configuration. The chimera approach requires the use of two computer codes, PEGSUS and a flow solver. PEGSUS calculates the interactions among the meshes and produces a file consisting of interpolation information that is used by the flow solver to obtain a global flow-field solution for the entire mesh system. This report documents the design and use of the latest version (4.0) of PEGSUS, and describes techniques for proper modeling of complex aerodynamic configurations. This manual has been developed for use by Army. Navy. Air Force, Defense Logistics Agency. and other Department of Defense (DoD) personnel who are responsible for preparing, coding, editing, or machine processing the Individual Contracting Action Report (over \$25,000). DD Form 350, as prescribed by Section IV of the DoD Federal Acquisition Regulation Supplement. In today's hypercompetitive global marketplace, accurate costestimating is crucial to bottom-line results. Nowhere is this moreevident than in the design and development of new products andservices. Among managing engineers responsible for developingrealistic cost estimates for new product designs, the number-onesource of information and guidance has been the Cost Estimator'sReference Manual. Comprehensive, authoritative, and practical, the Manual instructsreaders in the full range of cost estimating techniques andprocedures currently used in the

fields of development, testing, manufacturing, production, construction, software, general services, government contracting, engineering services, scientific projects, and proposal preparation. The authors clearly explain how to go about gathering the data essential to preparing a realistic estimate of costs and guide the reader step by step through each procedure. This new Second Edition incorporates a decade of progress in the methods, procedures, and strategies of cost estimating. All the material has been updated and five new chapters have been added to reflect the most recent information on such increasingly important topics as activity-based costing, software estimating, design-to-cost techniques, and cost implications of new concurrent engineering and systems engineering approaches to projects. Indispensable to virtually anyone whose work requires accurate cost estimates, the Cost Estimator's Reference Manual will be especially valuable to engineers, estimators, accountants, and contractors of products, projects, processes, and services to both government and industry. The essential ready-reference for the techniques, methods, and procedures of cost estimating COST ESTIMATOR'S REFERENCE MANUAL Second Edition Indispensable for anyone who depends on accurate cost estimates for engineering projects, the Cost Estimator's Reference Manual guides the user through both the basic and more sophisticated aspects of the estimating process. Authoritative and comprehensive, the Manual seamlessly integrates the many functions--accounting, financial, statistical, and management--of modern cost estimating practice. Its broad coverage includes estimating procedures applied to such areas as: \* Production \* Software \* Development \* General services \* Testing \* Government contracting \* Manufacturing \* Engineering \* Proposal preparation \* Scientific projects \* Construction This updated and expanded Second Edition incorporates all the most important recent developments in cost estimating, such as activity-based costing, software estimating, design-to-cost techniques, computer-aided estimating tools, concurrent engineering, and life cycle costing. For engineers, estimators, accountants, planners, and others who are involved in the cost aspects of projects, the Cost Estimator's Reference Manual is an invaluable information source that will pay for itself many times over. This Manual has been developed for use by Army, Navy, Air Force, Defense Supply Agency and other Department of Defense personnel, who are responsible for preparing, coding, editing, or machine processing the Individual Procurement Action Report, DD Form 35, prescribed by Section XXI of the Armed Services Procurement Regulation. A. Hastings Ross, D.D.; the Pilgrim Pastor's Manual, issued by Rev. George M. Boynton, D.D.; the Handbook of Services, arranged for Christian ministers by Rev. Martyn Summerbell, D.D.; the Principles and Government of the Christian Church of the Southern Christian Convention, and others - particularly, the Congregational Manual and Rules of Order, published by Rev. William E. Barton, D.D., from which are taken the service of installation of deacons; the service of breaking ground for a church; the service for the laying of a corner stone; the order of baptism of infants; and the procession, grouping, and recession for the marriage ceremony. The compiler is indebted to many other sources, such as constitutions of churches, associations and conferences, and also to the findings of special committees of the various states. The order of morning service and the communion service are taken from the Pilgrim H gmnal, which was consulted for other aids for the church services. Credit is also due to Prayers for Services, by Morgan Phelps Noyes. Keeping in conference with the Commission on the Ministry and

the Executive Committee, the compiler has referred the salient parts of the manuscript to all state superintendents; consulted the constitutions and by-laws of practically all of the states and many of the associations, and studied the handbooks of churches. In connection with the fundamental documents relating to the local church the criticism and advice of some fifty pastors were sought. The thanks of the denomination as well as of the compiler are due to all these, who have cooperated willingly and most helpfully.
