The midwife's role is examined in the community and family-health context in this handbook on effective maternal and newborn care for midwives and other healthcare providers. The skills, competencies, and knowledge required to make informed decisions about neo- and postnatal care are covered, including anatomy and the physiology of reproduction, high-risk pregnancies, and labor and birth. Theoretical and practical issues illuminate a midwife's role in the prevention of illness in mothers and babies, with attention to the unique challenges of

midwifery in developing nations. Insights from current research studies and critical questions about midwife practice will help those new to health care understand the unique challenges of this form of health-service delivery. This book is the only research methods book you need to succeed whilst studying nursing and midwifery. Ideal for all pre and beyond registration nurses, this book has everything you need to know about consuming, critiquing and using research; it then builds on this foundation to develop these ideas into workable practice for real-world research. Inspired by over 25 years combined

experience, the authors have structured the book around the complimentary spheres of theory and practice and take you through each step of the research process, demonstrating how to choose a question, design your research proposal, collect data, analyse your findings and write up your research. It explores:

- Evidence-based research
- Literature and systematic reviews
- Ethics
- Secondary Data
- Research design
- Methodologies and individual methods
- Data analysis - quantitative and qualitative

Interwoven with case studies and embracing quantitative, qualitative and mixed methods alike, this balanced textbook

provides an introduction to a wide range of theories and methods and is packed full of material specially created to meet student and instructor needs. Whether you are new to research methods or returning to formal education and hoping to conduct your own research, this book is your ideal companion. Every year throughout the world, about four million babies die before they reach one month old, most during the critical first week of life. Most of these deaths are a result of the poor health and nutritional status of the mother, combined with problems such as tetanus or asphyxia, trauma, low birth weight, or preterm birth.

However, many of the conditions which result in perinatal death are preventable or treatable without the need for expensive technology. Against this background, this publication contains guidance on evidence-based standards for high quality care provision during the newborn period, considering the needs of mother and baby. It has been produced to assist countries with limited resources to reduce neonatal mortality. The information is arranged under four main headings: clinical assessment, findings and management; principles of newborn baby care; procedures; record keeping and essential equipment,

supplies and drugs. This title provides invaluable support for practitioners promoting involvement of fathers during childbirth and early parenthood. Focusing directly on assisting midwives and neonatal nurses, this book considers the effects of their practice on men's fatherhood experiences. An essential guide to this most important of examinations The first book to assist in the recognition of the psychosocial and emotional elements of physical disability that may impact on the family Provides a multi-professional perspective, with contributors from specialists in their fields Each chapter addresses the subject from a holistic

perspective that includes ethical, legal and psychosocial aspects as well as the physical Caring for the well newborn is an essential element of everyday midwifery practice. Providing a comprehensive guide to the problems associated with newborn babies, Care of the Newborn by Ten Teachers is a key textbook for trainee midwives. The ten teachers involved in writing this book are drawn from all over the UK and bring together a w Being an effective midwife requires a range of knowledge and skills, all of which are essential to provide competent and safe care to childbearing women and their infants. Midwifery Skills at a Glance

offers an invaluable, straightforward guide for students and practitioners – offering readable, easily digestible information, supported with illustrations throughout to enhance application to practice. Clear and concise throughout, Midwifery Skills at a Glance covers a wide range of skills – exploring issues such as infection control, personal hygiene care, and safeguarding; assessment, examination and screening skills; how to care for the woman and neonate with complex needs; drug administration and pain relief. A comprehensive, highly visual guide to the skills essential for

safe, effective, and compassionate midwifery practice. Written by experts in their field, it briefly describes each skill and provides clear illustrations — making it an ideal companion in clinical practice. Offers instruction on the safe use of a wide range of essential skills required to deliver safe, evidence-based maternity care. Includes service user viewpoints and key points to help consolidate learning and reflect on the experience of receiving care. Written with the student midwife in mind, *Midwifery Skills at a Glance* is equally invaluable for all others providing care, including Maternity Support Workers, mentors, registered midwives

and medical students. This pocket-sized book, presented in an easy-to-follow format, is designed as a tool for students and professionals to carry in any setting, providing a quick reference guide to supporting women and babies during the postnatal/neonatal period. Written in an accessible way, this book provides step-by-step processes for students to follow, and is ideal for professionals to share with the women and families in their care. "Neonatal Care" provides student midwives, student nurses, nursery nurses and senior health care assistants with a practical and theoretical guide to all aspects of basic neonatal care. All chapters are

mapped where appropriate to the NHS Knowledge and Skills Framework (2004) and the NMC Standards of proficiency for pre-registration midwifery education (2004). The role of the health care assistant is increasing significantly, particularly in the postnatal care of mother and baby, and there is a requirement for them to develop knowledge and skills to support their developing role. This book will enable HCAs to gain an understanding of basic neonatal care, including the identification of issues that may need to be referred to someone with more advanced skills. The chapters provide a gradual progression through the types of neonatal

services available, the care the neonate may require and why, and the midwife or nurse's role in facilitating neonatal care within the family. There is also consideration of cultural and diversity issues, communication, and legal and professional matters pertinent to caring for the neonate. All chapters have specific learning outcomes and self-assessment exercises to enable readers to assess and track their own progress." *Midwifery at a Glance* offers an easy-to-read yet comprehensive overview of everything a midwifery student needs to know, from conception to care of the newborn. This practical guide provides coverage of normal

pregnancy, maternal and foetal physiology, and pre-existing medical conditions and how these affect pregnancy and birth. It also features vital information on the role of the midwife, evidence-based practice, health promotion education, and perinatal mental health, as well as neonatal care and an overview of emergency situations. *Midwifery at a Glance: Contains superb full colour illustrations throughout* Is written specifically for midwifery students and includes all the concepts found on the midwifery curriculum Demonstrates links with other relevant multidisciplinary healthcare professionals

Midwifery at a Glance is the ideal guide, offering educational support for midwifery students in the application of midwifery knowledge into clinical practice. A practical, evidence-based guide for students and practitioners to undertake safe and effective neonatal examination Revised and updated throughout in line with current national and Nursing and Midwifery Council guidelines Full colour photographs and illustrations, as well as clinical case studies at the end of each chapter to help guide and illustrate good practice A new companion website (available at: www.wiley.com/go/lomax/newb)

orn) contains a wealth of information on all aspects of examining the newborn, including safeguarding, early warning systems, and tongue tie, as well as interactive multiple choice questions, and links to videos Care of the Well Newborn is a unique text that focuses on care of the term newborn for the first month of life. Written by distinguished experts in the field, it teaches students and professionals how and what to assess in the care of the non-verbal newborn, while also providing criteria for recognizing deviations from normal and strategies for managing complications that arise. The first text of its kind, it provides easily accessible

information on evidence-based neonatal care that follows current guidelines, standards, and recommendations. Also explored are physiology and pathophysiology, data collection, differential diagnosis, cultural considerations, and parental education. An ideal resource for both students and professionals, each chapter includes multiple choice questions, case studies, and activities to facilitate critical thinking and learning. This volume analyses the distinct care needs of late preterm infants and their parents by reflecting on the best available evidence to inform practice and latest innovations in care. It

addresses the spectrum of issues experienced by late preterm infants and their parents and ways to ensure healthy transitions from hospital to community. We define late preterm infants as those born between 34⁰/₇ to 36⁶/₇ 7 weeks' gestational age. The book uses creative writing prompts and a narrative style to gain insight and be self-reflection in and on practice to move the reader to embrace best practices. Issues such as mother's physical and emotional health, father's burden in postpartum period, the work organization of nurses caring for late preterm infants, feeding and jaundice which threaten readmission, and

neurodevelopmental outcomes of late preterm infants are specifically addressed. Areas of innovation are shared for consideration to prompt readers to think about continuous improvement in quality of care. The book shares local and global perspectives to address the common concerns related to care of late preterm infants and their parents, and fosters a partnership in promoting health of late preterm infants and their parents all across the globe. It is intended for any health care providers such as nurses, midwives, physicians and other allied care professionals like health visitors, community health

workers. Written by a multidisciplinary team of medical and nursing experts, this fully-updated second edition provides evidence-based coverage of all frequently seen neonatal conditions. Divided into chapters based on body-systems, each section includes discussion of relevant embryology, anatomy and physiology. Designed for real-life practice in the ward, each chapter includes clear guidelines for procedure and discussion of best practice. Case studies are used throughout to aid discussion of specific equipment, conditions, and situations. An essential resource for neonatal

nursing and midwifery students, as well as practicing neonatal nurses, this acclaimed text may also be of use to junior doctors beginning neonatology. Evidence-based theory clearly linked to application in the ward with case studies throughout. Procedure and equipment guidelines included, with specific recommendations for practice. Accessible format designed for easy reading and reference. Highly illustrated with relevant diagrams and pictures. Leading Health Law Educator, Amelda Langslow LLB, examines over 90 court cases dealing with the injury and death of mothers and babies in maternity services. In these real-life cases you will

read how midwives, neonatal nurses, and obstetricians justified their actions in court. Was someone at fault ?or were there systemic problems at the hospital? Each adverse incident will prompt the question ?Could this happen where I work? and encourage reflection through the safe practice issues raised at the end of each chapter. This practical and accessible casebook, drawn from labour and delivery wards, operating rooms and neonatal nurseries, has been designed to simplify complex legal principles and identify effective risk management strategies that will ensure good practice, promote patient safety - and keep you and your

hospital out of court. This contributed volume explores flexible, adaptable, and sustainable solutions to the shockingly high costs of birth across the globe. It presents innovative and collaborative maternity care practices and policies that are intersectional, human rights-based, transdisciplinary, science-driven, and community-based. Each chapter describes participatory and midwifery-oriented care that helps improve maternal and newborn outcomes within minoritized populations. The featured case studies respond to resource constraints and inequities of access by transforming relations between providers

and families or by creating more egalitarian relations among diverse providers such as midwives, obstetricians, and nurses that minimize inefficient hierarchies within maternity care. The authors build on a growing awareness that quality and respectful midwifery care has lower costs and improved outcomes for child bearers, newborns, and providers. Topics include: Sustainable collaborations including transfers of care among midwives and obstetricians in India, The Netherlands, Germany, United Kingdom, and Denmark Midwifery-oriented, femifocal, indigenous, and inclusive models of care that counter obstetric violence and

gender stereotypes in Mexico, Chile, Guatemala, Argentina, and India Doula care and midwifery care for women of color, previously incarcerated women, indigenous women, and other minoritized groups in the global north and south Practices and metrics for improving quality of newborn and maternal care as well as maternal and newborn outcomes in disruptive times and disaster settings Sustainable Birth in Disruptive Times is an essential and timely resource for providers, policy makers, students, and activists with interests in maternity care, midwifery, medical anthropology, maternal health, newborn health, obstetrics,

childbirth, medicine, and global health in disruptive times. Fully revised and updated to include the most up-to-date guidelines, references and resources, this new edition of the bestselling Oxford Handbook of Midwifery provides a concise and logical approach to midwifery practice in all its varied care settings. Giving a complete picture of the role of the midwife, the handbook reflects the mother's journey through conception, pregnancy and birth to the final postnatal examination of mother and baby. This new edition includes recent advances in midwifery practice including developments in antenatal care, labour, postnatal care and infant

feeding. The content is systematically structured to enable quick navigation and ensure the relevant information is at your fingertips whenever you need it. The handbook covers the vast majority of situations encountered in the many broad and varied settings of midwifery practice, from the normal, low-risk care of the mother and neonate, through to the more complex areas of working alongside obstetric or paediatric colleagues in high-risk pregnancy and birth situations. It provides all the information you will need to assist you when participating in complex care with confidence. With a wealth of references, recommendations, and

guidance from the authors' many years of experience this handbook will help you achieve the best possible results for your patients. The fundamentals of midwifery are divided into seven main sections, covering antenatal care; normal labour and birth; complicated labour and birth; postnatal care; family planning; care of the newborn; and infant feeding. It also gives information rarely covered in standard midwifery texts, including sexual health, complementary therapies, common blood values, investigations, and midwifery emergencies. Key interventions are laid out as algorithms to aid quick assimilation of the crucial

facts. Written by practising midwives, and checked by subject experts, you can trust this handbook to have the latest and best information you need. Presented in concise and easily readable style, the book is laid out with clear headings, and key facts listed in bullet points. Pocket-sized, with sturdy plastic covers, the Oxford Handbook of Midwifery is a unique and invaluable companion for students, practising midwives, educators, and anyone who needs to understand the challenging and rewarding work of midwifery. Midwifery Emergencies at a Glance is a succinct, illustrated guide covering the practical skills needed to manage

obstetric and midwifery emergencies, as well as high-risk midwifery care. It provides clear guidance on the factors which predispose to complications so that preventative management can be employed whenever possible. Broad-ranging yet easy-to-read, Midwifery Emergencies at a Glance details the underlying physiology and pathophysiology related to the emergency and explores both the physical and psychological care of the woman, partner and newborn during and following the emergency. Key features: Evidence-based, with guidance from the NMC, RCOG, NICE, and The Resuscitation Council

Presented in an innovative, visual style that makes the key concepts easy to understand Provides helpful websites that expand on various topics as well as providing information on support groups for the woman and her family Midwifery Emergencies at a Glance is an ideal guide for practising midwives, pre-registration student midwives, general practitioners and junior doctors to support both revision and clinical practice. Written by neonatal nurses and midwives for nurses and midwives, the 2nd edition highlights the collaborative nature of neonatal care and the provision of individualised, developmentally and culturally

appropriate, family-centred care. Spanning all neonatal care levels and considerations, across special care baby units (SCBU) and neonatal intensive care units (NICU), the text comprehensively addresses newborn screening, resuscitation, interdisciplinary teamwork, retrievals and transport; stabilisation of the high-risk newborn; legal and ethical issues; care of the normal newborn and end-of-life care in the neonatal unit. With an increased focus on the role of the midwife within the neonatal environment, the text is ideally suited to undergraduate nursing and midwifery students and as an introductory text for

postgraduate neonatal intensive care specialisation. preparation and other assignments Suitable for use in normal community and midwife led arenas, high tech environments and more rural areas of clinical practice Brand new design - incorporating helpful learning features - aids reader engagement and retention of facts Updated artwork program helps clarify complex physiological processes and other challenging concepts Important Notice: The digital edition of this book is missing some of the images or content found in the physical edition. The gold standard for midwives and students is back with Varney's Midwifery, Fifth Edition. New to this edition are chapters

describing the profession of midwifery, reproductive physiology, clinical genetics, and support for women in labor. Interwoven throughout is information on primary care, gynecology, maternity care, and neonatal care. With chapters written by a variety of expert midwives and an increased emphasis on reproductive anatomy and physiology, this new edition assists students and clinicians in understanding not only what to do but why. Updated to reflect evidence-based care, this edition also discusses the pathophysiology of various conditions in the context of normal changes in the reproductive cycle. Also

included are numerous new anatomical and clinical illustrations. The delivery of high quality and equitable care for both mothers and newborns is complex and requires efforts across many sectors. The United States spends more on childbirth than any other country in the world, yet outcomes are worse than other high-resource countries, and even worse for Black and Native American women. There are a variety of factors that influence childbirth, including social determinants such as income, educational levels, access to care, financing, transportation, structural racism and geographic variability in birth settings. It is

important to reevaluate the United States' approach to maternal and newborn care through the lens of these factors across multiple disciplines. Birth Settings in America: Outcomes, Quality, Access, and Choice reviews and evaluates maternal and newborn care in the United States, the epidemiology of social and clinical risks in pregnancy and childbirth, birth settings research, and access to and choice of birth settings. Praise for the previous edition: "...An outstanding handbook. It will be a familiar volume on most midwifery bookshelves, providing an excellent guide to midwifery focused care of both woman and child in the

birthing setting." - Nursing Times Online Providing a practical and comprehensive guide to midwifery care, The Midwife's Labour and Birth Handbook continues to promote best practice and a safe, satisfying birthing experience with a focus on women-centred care. Covering all aspects of care during labour and birth, from obstetric emergencies to the practicalities of perineal repair (including left-hand suturing), the fourth edition has been fully revised and updated to include: Full colour photographs of kneeling extended breech and footling breech births New water birth and breech water birth

photographs Female genital mutilation Sepsis Group B streptococcus Care of the woman with diabetes /Neonatal hypoglycaemia Mental health Seeding/microbirthing It also addresses important issues such as: Why are the numbers of UK women giving birth in stirrups RISING rather than falling? Why are so few preterm babies given bedside resuscitation with the cord intact? Would the creation of midwife breech practitioners/specialists enable more women to choose vaginal breech birth and is breech water birth safe? What is the legal position for women who choose to free birth - and their birth partners? Why are

midwives challenging the OASI care bundle? Incorporating research, evidence and anecdotal observations, The Midwife's Labour and Birth Handbook remains an essential resource for both student midwives and experienced practising midwives. The new edition of this highly acclaimed step-by-step guide continues to offer readers with the relevant physiology, evidence-base and rationale for the key midwifery skills. Authored by experienced practitioners and educationalists, Skills for Midwifery Practice 4e will be ideal for all midwifery students, both from within the UK and worldwide. Presents over 150 essential midwifery procedures

in an easy-to-read, quick reference format 'Learning Objectives' and 'end-of-chapter' self-assessment exercises allow readers to monitor their progress Refers to the latest evidence and research, including current national and international guidelines Explains the underlying physiology associated with pregnancy and childbirth Over 150 artworks help explain physiological processes and clinical procedures 'Roles and Responsibilities' boxes define the nature and extent of current practice Ideal for use as a basis for teaching and assessment New format - now with colour - makes learning even easier! Explores the use

and significance of the Modified Early Obstetric Warning Scoring Chart Discusses advances in equipment usage including the application of sequential compression devices, temporal artery thermometers, and pulse oximetry in the early detection of critical congenital heart disease Contains advances in microbiology and infection control including the application and removal of gloves and the use of ANTT for each relevant procedure Physiology updates include an expanded section on normal and abnormal breathing patterns, the structure of the stratum corneum at birth and the factors that affect its

barrier function, and neonatal reflexes present at birth
Updated information regarding the use of the automated external defibrillator during maternal resuscitation, and the use of blended air and oxygen and pulse oximetry during neonatal resuscitation
Care of the traumatised perineum - including expanded discussion of modern suture materials
Recognition and management of complications associated with infusion therapy and epidural analgesia
"This pocket-sized book presented in an easy to follow format, is designed as tool for students and professionals to carry in any setting, providing a quick reference guide to supporting

women and babies during the postnatal/neonatal period.
Written in an accessible way, this book provides step by step processes for students to follow, and is ideal for professionals to share with the women and families in their care"-- 'Postnatal' is the fourth title in the Midwifery Essentials series and explores contemporary postnatal care for women and their families, exploring the role of the midwife as a member of the multi-professional team. This book thoroughly prepares the reader to provide safe, evidence-based, woman-centred postnatal care for mothers and their babies. The postnatal examination of the

woman, and the baby check
Care of the baby in the immediate postnatal period
The features of the normal neonate
The newborn clinical examination
Hospital postnatal care and caesarean section
The role of the community midwife and emotional wellbeing
Postnatal fertility control
Issues involved in supporting the woman to feed her baby.
Midwifery Essentials consists of a series of four pocketbooks, based on the popular and successful 'Midwifery Basics' articles published in 'The Practising Midwife' journal. They have been written in response to many requests from students, midwives and supervisors to combine these

articles into a handy text. The books remain true to the style of the articles and have been updated and expanded to create a user-friendly source of information on different aspects of midwifery care. They will stimulate debate and require the reader both to reflect on their current practice, local policies and procedures and to challenge care that is not woman centred. There are many dimensions to the provision of woman-centred care that practitioners need to consider and understand so the series is based on the principles of holistic care, using a 'jigsaw' model as a framework. Each aspect of the jigsaw should be considered

during the assessment, planning, implementation and evaluation of woman-centred maternity care, for example: how does a midwife obtain consent from a woman for a procedure, maintain a safe environment during the delivery of care and make the most of the opportunity to promote health? what are the professional and legal issues in relation to the procedure and is this practice based on the best available evidence? which members of the multi-professional team contribute to this aspect of care and how is it influenced by the way in which care is organised? Series features: Provides information essential for best practice at all

stages of pregnancy and birth 'Jigsaw' model promotes holistic care Scenarios help readers understand the context of maternity care Activities encourage further exploration and debate. This thesis uses a complexity thinking approach to investigate the implementation of development strategies to improve maternal health taking the province of East New Britain, in Papua New Guinea, as a case study. A key global strategy for improving maternal and neonatal health is that every woman and baby receives assistance from an appropriately qualified and skilled health worker with midwifery skills. However,

globally there continues to be a lack of universal care, with one in four births occurring in the absence of skilled assistance. In Papua New Guinea, access to skilled care remains inequitable and, since independence, there has been little reduction in the numbers of women and babies experiencing poor outcomes. Using a qualitative inquiry approach, the thesis employs a range of methods including analysis of historical and contemporary documents, interviews, and observation of clinical and administrative practice, to better understand the maternal health care system. Selected conceptual tools from complexity thinking

guide analysis, namely path dependence and system lock-ins; connectivity and nonlinearity; and self-organisation and emergence. This work contributes to building knowledge of implementation of development strategies by highlighting the multiple ways that the maternal health care system intersects with other systems. It argues that these systems are all dynamic constructs shaped by historical, social and political conditions. As such, midwifery and health management practice are constrained by system constructs which do not recognise the importance of the role of midwives in

protecting maternal and neonatal health. Constraints include inadequate prioritisation of maternal health to ensure midwives are enabled to provide care across their full scope of practice; non-establishment of maternal health review committees; and little agreement regarding education for cadres of health workers expected to provide women and neonates with midwifery care during pregnancy, labour and birth, and postpartum. In order to ensure all women receive skilled midwifery care, and thus improve maternal and neonatal health, this thesis argues it is crucial for development strategies to

remain cognisant of, and engage with, the broader health system and other intersecting social systems. In addition to building technical midwifery capacity, development strategies must constructively disrupt the status quo to generate sufficient endogenous system change to enable the prioritisation of maternal health. This requires a balance between international recommendations, and existing systems realities and endogenous, context-dependent solutions. This pocket-sized book, presented in an easy-to-follow format, is designed as a tool for students and professionals to carry in

any setting, providing a quick reference guide to supporting women and babies during the postnatal/neonatal period. Written in an accessible way, this book provides step-by-step processes for students to follow, and is ideal for professionals to share with the women and families in their care.
