Hydrocarbon Exploration and Production Aug 08 2021 This book on hydrocarbon exploration and production is the first volume in the series *Developments in Petroleum Science*. The chapters are: The Field Life Cycle, Exploration, Drilling Engineering, Safety and The Environment, Reservoir Description, Volumetric Estimation, Field Appraisal, Reservoir Dynamic Behaviour, Well Dynamic Behaviour, Surface Facilities, Production Operations and Maintenance, Project and Contract Management, Petroleum Economics, Managing the Producing Field, and Decommissioning.

Popular Mechanics Nov 23 2022 Popular Mechanics inspires, instructs and influences readers to help them master the modern world. Whether it's practical DIY home-improvement tips, gadgets and digital technology, information on the newest cars or the latest breakthroughs in science -- PM is the ultimate guide to our high-tech lifestyle.

New Trends in Intercalation Compounds for Energy Storage Oct 18 2019 Recent advances in electrochemistry and materials

science have opened the way to the evolution of entirely new types of energy storage systems: rechargeable lithium-ion batteries, electrochroms, hydrogen containers, etc., all of which have greatly improved electrical performance and other desirable characteristics. This book encompasses all the disciplines linked in the progress from fundamentals to applications, from description and modelling of different materials to technological use, from general diagnostics to methods related to technological control and operation of intercalation compounds. Designing devices with higher specific energy and power will require a more profound understanding of material properties and performance. This book covers the status of materials and advanced activities based on the development of new substances for energy storage.

Federal Information System Controls Audit Manual (FISCAM) Jan 25 2023 FISCAM presents a methodology for performing info. system (IS) control audits of governmental entities in accordance with professional standards. FISCAM is designed to be used on financial and performance audits and attestation engagements. The methodology in the FISCAM incorp. the following: (1) A top-down, risk-based approach that considers materiality and significance in determining audit procedures; (2) Evaluation of entitywide controls and their effect on audit risk; (3) Evaluation of general controls and their pervasive impact on bus. process controls; (4) Evaluation of security mgmt. at all levels; (5) Control hierarchy to evaluate IS control weaknesses; (6) Groupings of control categories consistent with the nature of the risk. Illus.

Crime, Histoire et Sociétés, 2000/2 Aug 20 2022

"An Honorable Place in American Air Power" Apr 04 2021 "Military historian and Civil Air Patrol (CAP) member Frank A. Blazich Jr. collects oral and written histories of the CAP's short-lived--but influential--coastal air patrol operations of World War II and expands it in a scholarly monograph that cements the legacy of this vital civil-military cooperative effort"--

Advice And Support: The Early Years 1941-1960 [Illustrated Edition] Feb 14 2022 Includes over 75 maps, photos and plans. The present volume describes the activities of the U.S. Army in Vietnam during World War II, military advice and assistance to the French government during the immediate post-war years, and the advisory program that developed after the Geneva Agreements of 1954. Its scope ranges from high-level policy decisions to low-echelon advisory operations in the field, presented against a background of relevant military and political developments. The author enjoyed access to the official records of the period and examined personal papers, interviews, other documentary sources, and miscellaneous published materials. Useful not only as a study of military assistance but as a view of the Army as an agent of national policy, this volume is a fitting introduction to the overall study of the conflict in Vietnam.

A+. Nov 30 2020

Thomas Merton Jul 19 2022 Thomas Merton was arguably the twentieth century's most widely published and widely read spiritual writer. This book explores Merton's prophetic writings and experience as they offer guidance for those seeking to experience God, to simplify their lives, to live more humanly, and to shape Christian community in the face of alienation, consumerism, noise, and technology. The book includes parts of three previously unpublished conference contributions by

Merton on technology. Exploring Merton's thoughts on monastic renewal, prayer, radical simplicity, ecology, technology, war, peace and interfaith dialogue, Dekar reminds us why Merton was so influential and why he continues to be so.

Technical Manual and Year Book of the American Association of Textile Chemists and Colorists Oct 22 2022

ABCs of z/OS System Programming Dec 20 2019 A major goal of operating systems is to process jobs while making the best use of system resources. Thus, one way of viewing operating systems is as resource managers. Before job processing, operating systems reserve input and output resources for jobs. During job processing, operating systems manage resources such as processors and storage. After job processing, operating systems free all resources used by the completed jobs, making the resources available to other jobs. This process is called resource management. There is more to the processing of jobs than the managing of resources needed by the jobs. At any instant, a number of jobs can be in various stages of preparation, processing, and post-processing activity. To use resources efficiently, operating systems divide jobs into parts. They distribute the parts of jobs to queues to wait for needed resources. Keeping track of where things are and routing work from queue to queue is called workflow management, and is a major function of any operating system. JES3 considers job priorities, device and processor alternatives, and installation-specified preferences in preparing jobs for processing job output. This IBM® Redbooks® publication describes a JES3 environment that includes the following: - Single-system image - Workload balancing - Availability - Control flexibility - Physical planning flexibility.

Substrate Noise Coupling in Mixed-Signal ASICs Feb 20 2020 This book is the first in a series of three dedicated to advanced topics in Mixed-Signal IC design methodologies. It is one of the results achieved by the Mixed-Signal Design Cluster, an initiative launched in 1998 as part of the TARDIS project, funded by the European Commission within the ESPRIT-IV Framework. This initiative aims to promote the development of new design and test methodologies for Mixed-Signal ICs, and to accelerate their adoption by industrial users. As Microelectronics evolves, Mixed-Signal techniques are gaining a significant importance due to the wide spread of applications where an analog front-end is needed to drive a complex digital-processing subsystem. In this sense, Analog and Mixed-Signal circuits are recognized as a bottleneck for the market acceptance of Systems-On-Chip, because of the inherent difficulties involved in the design and test of these circuits. Specially, problems arising from the use of a common substrate for analog and digital components are a main limiting factor. The Mixed-Signal Cluster has been formed by a group of 11 Research and Development projects, plus a specific action to promote the dissemination of design methodologies, techniques, and supporting tools developed within the Cluster projects. The whole action, ending in July 2002, has been assigned an overall budget of more than 8 million EURO.

Circuit Design for Wireless Communications Jan 01 2021 This is the first book focusing on the subject of image rejection in wireless receiver design, which is crucial for the current and next generation mobile terminals. It serves as a very useful reference for wireless design engineers, researchers and students.

The New Police in the Nineteenth Century Sep 21 2022 The period 1829-1856 witnessed the introduction of the 'New Police' to Great Britain and Ireland. Via a series of key legislative acts, traditional mechanisms of policing were abolished and new, supposedly more efficient, forces were raised in their stead. Subsequently, the introduction of the 'New Police' has been represented as a watershed in the development of the systems of policing we know today. But just how sweeping were the changes made to the maintenance of law and order during the nineteenth century? The articles collected in this volume (written by some of the foremost criminal justice historians) show a process which, while cumulatively dramatic, was also at times protracted and acrimonious. There were significant changes to the way in which Britain and Ireland were policed during the nineteenth century, but these changes were by no means as straightforward or as progressive as they have at times been represented.

Methods for the Determination of Metals in Environmental Samples Mar 15 2022 Methods for the Determination of Metals in Environmental Samples presents a detailed description of 13 analytical methods covering 35 analytes that may be present in a variety of sample types. The methods involve a wide range of analytical instrumentation including inductively coupled plasma (ICP)/atomic emission spectroscopy (AES), ICP/mass spectroscopy (MS), atomic absorption (AA) spectroscopy, ion chromatography (IC), and high performance liquid chromatography (HPLC). The application of these techniques to such a diverse group of sample types is a unique feature of this book. Sample types include waters ranging from drinking water to marine water, in addition to industrial and municipal wastewater, groundwater, and landfill leachate. The book also includes methods that will accommodate biological tissues, sediments, and soils. Methods in this book can be used in several regulatory programs because of their applicability to many sample types. For example, ICP/AES, ICP/MS, and AA methods can be used in drinking water and permit programs. Methods applicable to marine and estuarine waters can be used for the EPA's National Estuary Program. Terminology is consistent throughout the book, an important feature especially for the quality control sections where standardized terminology is not yet available. Methods for the Determination of Metals in Environmental Samples is an indispensable methods guide for all environmental labs, wastewater labs, drinking water labs, lab managers, consultants, and groundwater engineers.

Microlog, Canadian Research Index Aug 28 2020 An indexing, abstracting and document delivery service that covers current

Methods of Behavior Analysis in Neuroscience Oct 30 2020 Using the most well-studied behavioral analyses of animal subjects to promote a better understanding of the effects of disease and the effects of new therapeutic treatments on human cognition, *Methods of Behavior Analysis in Neuroscience* provides a reference manual for molecular and cellular research scientists in both academia and the pharmaceutical

CMOS Digital Integrated Circuits Jul 27 2020 The fourth edition of *CMOS Digital Integrated Circuits: Analysis and Design* continues the well-established tradition of the earlier editions by offering the most comprehensive coverage of digital CMOS circuit design, as well as addressing state-of-the-art technology issues highlighted by the widespread use of nanometer-scale CMOS technologies. In this latest edition, virtually all chapters have been re-written, the transistor model equations and device parameters have been revised to reflect the significant changes that must be taken into account for new technology generations, and the material has been reinforced with up-to-date examples. The broad-ranging coverage of this textbook starts with the fundamentals of CMOS process technology, and continues with MOS transistor models, basic CMOS gates, interconnect effects, dynamic circuits, memory circuits, arithmetic building blocks, clock and I/O circuits, low power design techniques, design for manufacturability and design for testability.

Maritime Economics Jun 18 2022 Now in its second edition *Maritime Economics* provides a valuable introduction to the organisation and workings of the global shipping industry. The author outlines the economic theory as well as many of the operational practicalities involved. Extensively revised for the new edition, the book has many clear illustrations and tables. Topics covered include: * an overview of international trade * Maritime Law * economic organisation and principles * financing ships and shipping companies * market research and forecasting.

Practical Handbook of Falcon Husbandry and Medicine Apr 23 2020 Falcon medicine exists for centuries, but in the past 10-15 years tremendous progress and new development of diseases and treatment methods have been made. It has always been a challenge to treat these beautiful birds of prey and the challenge continues until now. Falcons, falconry and falcon medicine are important in Abu Dhabi and the United Arab Emirates which can be regarded as the cradle of modern falcon medicine in the 21st century. Having treated more than 30,000 falcons over the past years, the author feels that the time has come to share his outstanding experience with the veterinarians' and falconers' community for the sake of these incredible birds of prey -- to enhance their living conditions and to improve medical falcon health care world-wide. This book is based on his experience of a large variety of different cases and is therefore very practical-oriented. It is intended to be a useful handbook for all interested people working with falcons such as veterinarians, veterinary students, falconers and raptor rehabilitation workers. The aim of this book is not to include all research that has ever been done on falcons, but to highlight those issues that are really working out in practice. It includes 17 chapters ranging from history of falcon medicine to different diseases up to first aid and intensive care

medicine.

Phenolic Resins May 25 2020 This vastly expanded 2nd edition contains all the new developments since 1985. It describes significant new phenolic resin chemistry, new applications with up-to-date developments, and includes detailed standardized test methods important for ISO 9001 ff certification.

Shipping Economics Mar 23 2020 Shipping is by far the most significant mode of transportation for the carriage of freight. In terms of volume alone, no other mode comes close. Its dominance is even more overwhelming when distances are accounted for. This book is concerned with the economics of this pivotal mode of transportation. It reveals that the influences on the development and current state of shipping economics research are extremely eclectic. The various chapters in the book represent areas that are of central concern to ongoing research in the field. As such, the book is useful to students, researchers, industrialists, policy makers and consultants. The authors of the contributed chapters are some of the leading names in the world of shipping economics, addressing a number of diverse areas: The econometric modeling of shipping markets; Shipping finance (a critical issue in such a capital intensive industry); Fiscal policy (and its impact on an international industry with great asset mobility) and Safety and security (aspects that have risen to prominence with increasing concerns over the environment and international terrorism). Ultimately, while shipping as a business depends upon trade, it is absolutely certain that the business of trade depends upon shipping. The final two chapters, therefore, incorporate aspects of network economics, welfare economics and international trade theory to analyze where and how shipping sits within the wider perspective of industrial supply chains. Professor Kevin Cullinane, BA BSc MSc PhD FCILT CNI Professor Kevin Cullinane is Chair in Marine Transport and Management at the University of Newcastle in the U.K. He was previously Professor and Head of the Department of Shipping and Transport Logistics at the Hong Kong Polytechnic University, Head of the Centre for International Shipping and Transport at Plymouth University, Senior Partner in his own transport consultancy company and Research Fellow at the University of Oxford Transport Studies Unit. He is a Fellow of the Chartered Institute of Logistics and Transport and has been a transport adviser to the governments of Hong Kong, Egypt, Chile and the U.K. He holds visiting Professorships at a number of institutions and an Honorary Professorship at the University of Hong Kong.

The Effects of Early Social-Emotional and Relationship Experience on the Development of Young Orphanage Children

Dec 12 2021 Undertaken at orphanages in Russia, this study tests the role of early social and emotion experience in the development of children. Children were exposed to either multiple caregivers who performed routine duties in a perfunctory manner with minimal interaction or fewer caregivers who were trained to engage in warm, responsive, and developmentally appropriate interactions during routine care. Engaged and responsive caregivers were associated with substantial improvements in child development and these findings provide a rationale for making similar improvements in other institutions, programs, and

organizations.

Stepped Care 2.0: A Paradigm Shift in Mental Health Jan 21 2020 This book is a primer on Stepped Care 2.0. It is the first book in a series of three. This primer addresses the increased demand for mental health care by supporting stakeholders (help-seekers, providers, and policy-makers) to collaborate in enhancing care outcomes through work that is both more meaningful and sustainable. Our current mental health system is organized to offer highly intensive psychiatric and psychological care. While undoubtedly effective, demand far exceeds the supply for such specialized programming. Many people seeking to improve their mental health do not need psychiatric medication or sophisticated psychotherapy. A typical help seeker needs basic support. For knee pain, a nurse or physician might first recommend icing and resting the knee, working to achieve a healthy weight, and introducing low impact exercise before considering specialist care. Unfortunately, there is no parallel continuum of care for mental health and wellness. As a result, a person seeking the most basic support must line up and wait for the specialist along with those who may have very severe and/or complex needs. Why are there no lower intensity options? One reason is fear and stigma. A thorough assessment by a specialist is considered best practice. After all, what if we miss signs of suicide or potential harm to others? A reasonable question on the surface; however, the premise is flawed. First, the risk of suicide, or threat to others, for those already seeking care, is low. Second, our technical capacity to predict on these threats is virtually nil. Finally, assessment in our current culture of fear tends to focus more on the identification of deficits (as opposed to functional capacities), leading to over-prescription of expensive remedies and lost opportunities for autonomy and self-management. Despite little evidence linking assessment to treatment outcomes, and no evidence supporting our capacity to detect risk for harm, we persist with lengthy intake assessments and automatic specialist referrals that delay care. Before providers and policy makers can feel comfortable letting go of risk assessment, however, they need to understand the forces underlying the risk paradigm that dominates our society and restricts creative solutions for supporting those in need.
